

27 April 2026

Jenkins 16 Jenkins – Git – Webhooks

The screenshot displays the AWS Management Console interface for EC2 instances. The top navigation bar includes the AWS logo, a search bar, and the user's profile information. The left sidebar shows the navigation menu with options like Dashboard, AWS Global View, Events, Instances, Instance Types, Launch Templates, Spot Requests, Savings Plans, Reserved Instances, Dedicated Hosts, Capacity Reservations, Capacity Manager, and Images.

The main content area is titled "Instances (2)" and shows a table of two running EC2 instances:

Name	Instance ID	Instance state	Instance type	Status check	Availability Zone	Public IPv4 DNS
Tomcat-Server	i-0889ca0f6bb33035b	Running	t3.micro	Initializing	us-east-2c	ec2-3-145-4-97.us-east...
Jenkins-Git-W...	i-0883c9633eb791548	Running	t3.micro	Initializing	us-east-2c	ec2-52-14-108-78.us-e...

Below the table, there is a section titled "Select an instance" which is currently empty.

Quick connect... ec2-3-145-4-147-us-east-2 compute x

A screenshot of the Apache Tomcat 9.0.117 homepage. The browser address bar shows the URL https://leapscholar.com. The page features a navigation bar with links: Home, Documentation, Configuration, Examples, Wiki, and Mailing Lists, along with a Find Help button. The main heading is 'Apache Tomcat/9.0.117' with the ASF logo. A green banner states: 'If you're seeing this, you've successfully installed Tomcat. Congratulations!'. Below this, there's a section for 'Recommended Reading' with links to 'Security Considerations How-To', 'Manager Application How-To', and 'Clustering/Session Replication How-To'. To the right of these links are buttons for 'Server Status', 'Manager App', and 'Host Manager'. A 'Developer Quick Start' section includes links for 'Tomcat Setup', 'First Web Application', 'Realms & AAA', 'JDBC Data Sources', 'Examples', 'Servlet Specifications', and 'Tomcat Versions'. At the bottom, there are buttons for 'Managing Tomcat', 'Documentation', and 'Getting Help'.

Post-build Actions

Triggers

Set up automated actions that start your build based on specific events, like code changes or scheduled times.

Trigger builds remotely (e.g., from scripts)

Build after other projects are built

Build periodically

GitHub hook trigger for GITScm polling

Poll SCM

Environment

Configure settings and variables that define the context in which your build runs, like credentials, paths, and global parameters.

Delete workspace before build starts

Advanced

Use secret text(s) or file(s)

Add timestamps to the Console Output
